

Application No.: 09/466947Case No.: 55288US002**Amendments**

Please amend the application as follows:

**In the Claims**

Please cancel claims 9 and 20.

Please amend the claims as follows:

1.(currently amended) A set of articles, each article comprising:

a product container having a polymeric body and a chamber within the body, each body  
having an exterior surface with a certain color;

a polymer coating extending over the exterior surface, the coating having a color that  
contrasts with the color of the exterior surface, the coating including a certain region and also a  
certain area that is spaced from the certain region, the polymer coating presenting a non-laser  
engraved genus identification mark in the certain area; and

a laser engraved identification mark formed within the certain region of the coating, the  
laser engraved identification mark being a species mark.

2.(previously amended) A set of articles according to claim 1 wherein the exterior surface of at  
least one article is visible within the species identification mark.

3.(previously amended) A set of articles according to claim 2 wherein the exterior surface  
visible within the species identification mark of at least one article is devoid of surface  
irregularities.

4.(previously amended) A set of articles according to claim 1 wherein the laser engraved  
identification mark of at least one article has a color that is different than the color of the polymer  
coating.

5. (cancelled)

Application No.: 09/466947Case No.: 55288US002

6.(previously amended) A set of articles according to claim 1 wherein the polymer coating of at least one article has a color presenting the genus identification mark.

7.(currently amended) A set of articles according to claim 6] A set of articles, each article comprising:

a body having an exterior surface with a certain color;

a polymer coating extending over the exterior surface, the coating having a color that contrasts with the color of the exterior surface, the coating including a certain region and also a certain area that is spaced from the certain region, the polymer coating presenting a non-laser engraved genus identification mark in the certain area; and

a laser engraved identification mark formed within the certain region of the coating, the laser engraved identification mark being a species mark,

wherein the polymer coating of at least one article has a color presenting the genus identification mark,

wher cin at least one article includes a container and a product in the container, and wherein the color of the polymer coating of the at least one article matches the color of the product.

8.(previously amended) A set of articles according to claim 7 wherein the product is a dental sealant or a dental restorative material.

9. (cancelled)

10.(currently amended) A set of articles according to claim [9] 1 wherein the product container includes a flowable material within the chamber.

11.(previously amended) A set of articles according to claim 10 wherein the material is a dental sealant or a dental restorative material.

---

Application No.: 09/466947Case No.: 55288IJS002

---

12.(previously amended) A set of articles according to claim 11 wherein the color of the polymer coating matches the color of the dental material.

13.(previously amended) A set of articles according to claim 1 wherein at least one article also includes a laser engraved identification mark that is spaced apart from the region of the exterior surface and is more difficult to see than the laser engraved identification mark formed within the certain region.

14.(previously amended) A set of articles according to claim 13 wherein the laser engraved identification mark that is spaced apart from the region of the exterior surface includes information selected from a group consisting of shelf life data, expiration data, date of manufacture, serial number, batch code data and lot code data.

15.(currently amended) [A set of articles according to claim 1] A set of articles, each article comprising:

a body having an exterior surface with a certain color;

a polymer coating extending over the exterior surface, the coating having a color that contrasts with the color of the exterior surface, the coating including a certain region and also a certain area that is spaced from the certain region, the polymer coating presenting a non-laser engraved genus identification mark in the certain area; and

a laser engraved identification mark formed within the certain region of the coating, the laser engraved identification mark being a species mark,

wherein at least one article includes a container and a product in the container.

16.(currently amended) [A set of articles according to claim 1] A set of articles, each article comprising:

a body having an exterior surface with a certain color;

a polymer coating extending over the exterior surface, the coating having a color that contrasts with the color of the exterior surface, the coating including a certain region and also a

---

certain area that is spaced from the certain region, the polymer coating presenting a non-laser engraved genus identification mark in the certain area; and  
a laser engraved identification mark formed within the certain region of the coating, the laser engraved identification mark being a species mark,  
wherinc at least one article is an orthodontic band.

17.(currently amended) A method of marking a set of articles comprising the acts of:

selecting a polymer coating having a color that contrasts with the color of an exterior surface of each article;

applying the coating to a certain region of the exterior surface of each article; and  
directing a laser beam toward the coating with sufficient power to cause at least a portion of the coating to undergo a chemical reaction and create an identification mark, wherein the act of directing the laser beam toward the coating creates a species mark, and wherein the act of applying the coating to the exterior surface of the article includes the act of creating a non-laser engraved genus mark that is distinct from the species mark,

wherein at least one article comprises a container made of a polymeric material and  
wherein the act of directing a laser beam toward the coating does not substantially soften the exterior surface of the container.

18.(previously amended) A method of marking a set of articles according to claim 17 wherein the act of directing a laser beam toward the coating causes at least some of the coating to volatilize.

19.(previously amended) A method of marking a set of articles according to claim 18 wherein the act of directing a laser beam toward the coating does not cause any surface irregularity on the exterior surface of at least one article.

20.(cancelled)

---

Application No.: 09/466947

Case No.: 55288US002

21.(previously amended) A method of marking a set of articles according to claim 17 wherein the act of directing a laser beam toward the coating causes at least some of the coating to polymerize.

22.(previously amended) A method of marking a set of articles according to claim 17 wherein the act of directing a laser beam toward the coating does not cause any substantial amount of surface irregularities on the exterior surface of the article.

23.(previously amended) A method of marking a set of articles according to claim 17 wherein the act of directing a laser beam toward the coating causes at least some of the coating to change color.

24.(previously amended) A method of marking a set of articles according to claim 23 wherein the act of directing a laser beam toward the coating does not cause any substantial amount of surface irregularities on the exterior surface of at least one article.

25. (cancelled)

26.(previously amended) A method of marking a set of articles according to claim 17 wherein the act of creating a genus mark includes the act of selecting a color of the polymer coating.

27.(currently amended) [A method of marking a set of articles according to claim 17] A method of marking a set of articles comprising the acts of:

selecting a polymer coating having a color that contrasts with the color of an exterior surface of each article;

applying the coating to a certain region of the exterior surface of each article; and  
directing a laser beam toward the coating with sufficient power to cause at least a portion of the coating to undergo a chemical reaction and create an identification mark, wherein the act of directing the laser beam toward the coating creates a species mark, and wherein the act of

Application No.: 09/466947

Case N .: 55288US002

applying the coating to the exterior surface of the article includes the act of creating a non-laser engraved genus mark that is distinct from the species mark,

wherein at least one article comprises a container and a product in the container, and wherein the act of selecting a polymer coating includes the act of selecting a polymer coating that has a color matching the color of the product in the container.

28.(previously amended) A method of marking a set of articles according to claim 27 whercin the product is a dental sealant or dental restorative material.

29.(previously amended) A method of marking a set of articles according to claim 17 and including the act of directing the laser beam toward at least one article at a location spaced from the coating in order to create another identification mark.

30.(previously amended) A method of marking a set of articles according to claim 29 wherein the act of directing the laser beam toward at least one article at a location spaced from the coating creates an identification mark that is more difficult to see than the identification mark that is created by the act of directing a laser beam toward the coating.

31.(currently amended) [A method of marking a set of articles according to claim 17] A method of marking a set of articles comprising the acts of:

selecting a polymer coating having a color that contrasts with the color of an exterior surface of each article;

applying the coating to a certain region of the exterior surface of each article; and  
directing a laser beam toward the coating with sufficient power to cause at least a portion of the coating to undergo a chemical reaction and create an identification mark, wherein the act of directing the laser beam toward the coating creates a species mark, and whercin the act of applying the coating to the exterior surface of the article includes the act of creating a non-laser engraved genus mark that is distinct from the species mark,

whercin at least one article is an orthodontic band.

Application No.: 09/466947Case N .: 55288US002

C,  
32.(previously added) A method of marking a set of articles according to claim 17 wherein the act of creating the genus mark is carried out for all of the articles in the set before the act of directing a laser beam toward the coating is carried out for any article of the set.
